1 Posters: WAND: a meta-data maintenance system over the internet

Anubhav Bhatia, Saikat Mukherjee, Saugat Mitra, Srinath Srinivasa

May 2005 Special interest tracks and posters of the 14th international conference on World Wide Web

Publisher: ACM Press

Full text available: pdf(57.12 KB) Additional Information: full citation, abstract, references, index terms

WAND is a meta-data management system that provides a file-system tree for users of an internet based P2P network. The tree is robust and retains its structure even when nodes (peers) enter and leave the network. The robustness is based on a concept of virtual folders that are automatically created to retain paths to lower level folders whenever a node hosting a higher-level folder moves away. Other contributions of the WAND system include its novel approach towards managing root directory infor ...

Keywords: maintenance, meta-data, peer-to-peer, wide-area distributed file system

2 Object lens: a "spreadsheet" for cooperative work

Kum-Yew Lai, Thomas W. Malone, Keh-Chiang Yu

October 1988 ACM Transactions on Information Systems (TOIS), Volume 6 Issue 4

Publisher: ACM Press

Full text available: pdf(1.78 MS)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

Object Lens allows unsophisticated computer users to create their own cooperative work applications using a set of simple, but powerful, building blocks. By defining and modifying templates for various semistructured objects, users can represent information about people, tasks, products, messages, and many other kinds of information in a form that can be processed intelligently by both people and their computers. By collecting these objects in customizable folders, users can create their ow ...

3 Short papers: Rethinking information handling: designing for information offload

Peter Dalsgaard, Eva Eriksson, Lone Koefoed Hansen

August 2005 Proceedings of the 4th decennial conference on Critical computing: between sense and sensibility CC '05

Publisher: ACM Press

Full text available: pdf(259.19 KB) Additional Information: full citation, abstract, references

This paper introduces information offload as a supplement way of responding to and

designing for information. By presenting iFlush, a design concept aiming at providing the user with a possibility to offload information and then instantly dispose of it, the paper presents an approach towards designing for reflection and also serves as a critique towards information overload. Furthermore, the absence of reflection on the role played by HCI community in the constant augmenting of all spaces is add ...

4 Web for data mining: organizing and interpreting the discovered rules using the Web

Yiming Ma, Bing Liu, Ching Kian Wong

June 2000 ACM SIGKDD Explorations Newsletter, Volume 2 Issue 1

Publisher: ACM Press

Full text available: pdf(8.41 MB) Additional Information: full citation, citings, index terms

Keywords: association rules, interestingness, post-processing, rule understanding, the Web

5 Presto: an experimental architecture for fluid interactive document spaces

Paul Dourish, W. Keith Edwards, Anthony LaMarca, Michael Salisbury

June 1999 ACM Transactions on Computer-Human Interaction (TOCHI), Volume 6 Issue 2

Publisher: ACM Press

Full text available: pdf(409.04 KB)

Additional Information: full citation, abstract, references, citings, index terms

Traditional document systems use hierarchical filing structures as the basis for organizing, storing and retrieving documents. However, this structure is very limited in comparison with the rich and varied forms of document interaction and category management in everyday document use. Presto is a prototype document management system providing rich interaction with documents through meaningful, user-level document attributes, such as "Word file," "published paper," &I ...

⁶ The GNOME 2 desktop environment

Russell Dyer

April 2003 Linux Journal, Volume 2003 Issue 108

Publisher: Specialized Systems Consultants, Inc.

Full text available: html(16.60 KB) Additional Information: full citation, abstract, index terms

GNOME 2 offers better-looking fonts and full-keyboard navigation.

7 Semantic-Chunks a middleware for ubiquitous cooperative work

November 2005 Proceedings of the 4th workshop on Reflective and adaptive middleware systems ARM '05

Publisher: ACM Press

Full text available: pdf(279.64 KB) Additional Information: full citation, abstract, references, index terms

To be productive, cooperative work has to be supported efficiently so that users do achieve their goals. This requires solving the well known fundamental problem of replicas consistency. *Update-based* solutions are easy to use transparently with commercial

applications, but consider every modification in a document as a new document update, thus fostering conflicts and hindering concurrency. Operational-based solutions promise increased concurrency, by interleaving compatible modific ...

The London Travel Demonstrator

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(3.02 MB) terms

Travel can be a stressful experience and it is an activity that is difficult to prepare for in advance. Although maps, routes and landmarks can be memorised, travellers do not get much sense of the spatial layout of the destination and can easily get confused when they arrive. There is little doubt that virtual environments techniques can assist in such situations, by, for example, providing walkthroughs of virtual cityscapes to effect route learning. The London Travel Demonstrato ...

Research session: new applications: Hubble: an advanced dynamic folder technology for XML

Ning Li, Joshua Hui, Hui-I Hsiao, Kevin S. Beyer

August 2005 Proceedings of the 31st international conference on Very large data bases VLDB '05

Publisher: VLDB Endowment

Full text available: pdf(422.35 KB) Additional Information: full citation, abstract, references, index terms

A significant amount of information is stored in computer systems today, but people are struggling to manage their documents such that the information is easily found. XML is a de-facto standard for content publishing and data exchange. The proliferation of XML documents has created new challenges and opportunities for managing document collections. Existing technologies for automatically organizing document collections are either imprecise or based on only simple criteria. Since XML documents a ...

10 Web Behavior Patterns: How knowledge workers use the web

Abigail J. Sellen, Rachel Murphy, Kate L. Shaw

April 2002 Proceedings of the SIGCHI conference on Human factors in computing systems: Changing our world, changing ourselves

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(425.34 KB) terms

We report on a diary study of how and why knowledge workers use the World Wide Web. By examining in detail a complete two-day set of Web activities from each of 24 people, we construct a framework with which to describe the different tasks knowledge workers undertake. By looking at the characteristics of each type of activity, we can see how certain activities are unsuited to particular kinds of technologies (e.g., mobile devices); how Web tools might be incrementally improved; and how we might ...

Papers: logical foundations I: Dynamic epistemic logic with assignment

H. P. van Ditmarsch, W. van der Hoek, B. P. Kooi

July 2005 Proceedings of the fourth international joint conference on Autonomous agents and multiagent systems AAMAS '05

Publisher: ACM Press

Full text available: pdf(403.22 KB) Additional Information: full citation, abstract, references, index terms

We add assignment operators to languages for epistemic actions, so that change of knowledge and change of facts can be combined in specifications of multi-agent system dynamics. We make a distinction between 'public assignment' and 'atomic assignment'. Public assignment means that the entire group of agents is aware of the factual change. This operation combines well with public announcement. We propose semantics for the logic of public announcements and public assignments, and we give a relevan ...

Joint session: Adaptive routing with stale information

July 2005 Proceedings of the twenty-fourth annual ACM SIGACT-SIGOPS symposium on Principles of distributed computing PODC '05

Publisher: ACM Press

Full text available: pdf(175.08 KB) Additional Information: full citation, abstract, references, index terms

We investigate adaptive routing policies for large networks in which agents reroute traffic based on old information. It is a well known and practically relevant problem that old information can lead to undesirable oscillation effects resulting in poor performance. We investigate how adaptive routing policies should be designed such that these effects can be avoided. The network is represented by a general graph with latency functions on the

edges. Traffic is managed by a large number of agents e ...

On the number of crossing-free matchings, (cycles, and partitions)

Micha Sharir, Emo Welzl

January 2006 Proceedings of the seventeenth annual ACM-SIAM symposium on Discrete algorithm SODA '06

Publisher: ACM Press

Full text available: pdf(289.95 KB) Additional Information: full citation, abstract, references

We show that a set of n points in the plane has at most $O(10.05^n)$ perfect matchings with crossing-free straight-line embedding. The expected number of perfect crossing-free matchings of a set of *n* points drawn i.i.d. from an arbitrary distribution in the plane is at most $O(9.24^n)$. Several related bounds are derived: (a) The number of all (not necessarily perfect) crossing-free matchings is at most $O(10.43^n)$

Congestion: Mitigating congestion in wireless sensor networks

Bret Hull, Kyle Jamieson, Hari Balakrishnan

Bret Hull, Kyle Jamieson, Hari Daiaki Sillian
November 2004 Proceedings of the 2nd international conference on Embedded networked sensor systems

Publisher: ACM Press

Full text available: pdf(532.98 KB) Additional Information: full citation, abstract, references, index terms

Network congestion occurs when offered traffic load exceeds available capacity at any point in a network. In wireless sensor networks, congestion causes overall channel quality to degrade and loss rates to rise, leads to buffer drops and increased delays (as in wired networks), and tends to be grossly unfair toward nodes whose data has to traverse a larger number of radio hops.

Congestion control in wired networks is usually done using end-to-end and network-layer mechanisms acting in ...

Paper session II: applications: A multimedia data base browsing system

Massimiliano Albanese, Carmine Cesarano, Antonio Picariello

Massimiliano Albanese, Carrille Cesarano, Antonio Figuresia.

June 2004 Proceedings of the 1st international workshop on Computer vision meets databases CVDB '04

Publisher: ACM Press

Full text available: pdf(483.79 KB) Additional Information: full citation, abstract, references, citings

Browsing large multimedia databases is becoming a challenging problem, due to the availability of great amounts of data and the complexity of retrieval. In this paper we propose a system that assists a user in browsing a digital collection making useful

recommendations. The system combines computer vision techniques and taxonomic classifications to measure the similarity between objects and adopts an innovative strategy to take into account user behavior.

Extensions and computational aspects of an iterative method

Raymond A. Marie, Patricia M. Snyder, William J. Stewart
August 1982 ACM SIGMETRICS Performance Evaluation Review, Proceedings of the 1982 ACM SIGMETRICS conference on Measurement and modeling of computer systems SIGMETRICS '82, Volume 11 Issue 4

Publisher: ACM Press

Full text available: pdf(545.76 KB) Additional Information: full citation, abstract, references

The so-called iterative methods are among a class of methods that have recently been applied to obtain approximate solutions to general queueing networks. In this paper it is shown that if the network contains feedback loops, then it is more advantageous to incorporate these loops into the analysis of the station itself rather than into the analysis of the complement of the station. We show how this analysis may be performed for a simple two-phase Coxian server. Additionally, it is shown that ...

Optimal processor interconnection topologies

Mamoru Maekawa

May 1981 Proceedings of the 8th annual symposium on Computer Architecture

Publisher: IEEE Computer Society Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(606.86 KB) terms

This paper proposes the optimal processor interconnection topologies for parallel processing. The topologies are optimal with respect to the performance/cost ratio under the controlled message transfer delay and can be systematically constructed for an arbitrary number of processors. The addition and the deletion of processors are simple and done with the minimum number of bus reconnections. The message transfer delay, as well as the reliability, can be controlled by changing the degree of ...

terms

We propose an algorithm for assessing probabilistic performance constraints for systems including components with uncertain delays. We make a case for designing systems based on a probabilistic relaxation of performance constraints, as this has the potential for resulting in lower silicon area and/or power consumption. We consider a concrete example, an MPEG decoder, for which we discuss modeling and assessment of probabilistic throughput constraints.

Peer to peer systems: A reputation system for peer-to-peer networks

window

Minaxi Gupta, Paul Judge, Mostafa Ammar

Minaxi Gupta, Paul Judge, Mostala Allindi June 2003 Proceedings of the 13th international workshop on Network and operating systems support for digital audio and video

Publisher: ACM Press

Full text available: pdf(186 94 KB)

Additional Information: full citation, abstract, references, citings, index terms

We investigate the design of a reputation system for decentralized unstructured P2P networks like Gnutella. Having reliable reputation information about peers can form the basis of an incentive system and can guide peers in their decision making (e.g., who to download a file from). The reputation system uses objective criteria to track each peer's contribution in the system and allows peers to store their reputations locally. Reputation are computed using either of the two schemes, debit-cred ...

Dynamic services and analysis: Make it fresh, make it quick: searching a network of

personal webservers

Mayank Bawa, Roberto J. Bayardo, Sridhar Rajagopalan, Eugene J. Shekita May 2003 Proceedings of the 12th international conference on World Wide Web Publisher: ACM Press

Full text available: pdf(500.28 KB)

Additional Information: full citation, abstract, references, citings, index terms

Personal webservers have proven to be a popular means of sharing files and peer collaboration. Unfortunately, the transient availability and rapidly evolving content on such hosts render centralized, crawl-based search indices stale and incomplete. To address this problem, we propose YouSearch, a distributed search application for personal webservers operating within a shared context (e.g., a corporate intranet). With YouSearch, search results are always fast, fresh and complete -- properties we ...

Posters: A bottom-up combinable name service for Peer-to-Peer network

: Yuichi Ueno

November 2002 Companion of the 17th annual ACM SIGPLAN conference on Objectoriented programming, systems, languages, and applications

Publisher: ACM Press

Full text available: pdf(219.26 KB) Additional Information: full citation, abstract, references

We need various higher level services for using Peer-to-Peer(P2P) network effectively and for building useful applications. We introduce a new distributed name service which enables bottom-up combination of local name spaces by complete decentralized control. Our name service provides much benefit for P2P networking and groupware applications.

24 Information access and retrieval (IAR): An architecture for information retrieval over

semi-collaborating Peer-to-Peer networks Iraklis A. Klampanos, Joemon M. Jose

March 2004 Proceedings of the 2004 ACM symposium on Applied computing

Publisher: ACM Press

Full text available: pdf(365.46 KB) Additional Information: full citation, abstract, references, index terms

Peer-to-Peer (P2P) networking is aimed at exploiting the potential of widely distributed information pools and its effortless access and retrieval irrespectively of underlying networking protocols, operating systems of devices. However, prohibiting limitations have been identified and perhaps the most important one is the successful location of relevant information sources and the efficient query routing in large, highly distributed P2P networks. In this paper, a novel, cluster-based architectur ...

29 Audio: Peer-to-peer internet telephony using SIP

June 2005 Proceedings of the international workshop on Network and operating systems support for digital audio and video NOSSDAV '05

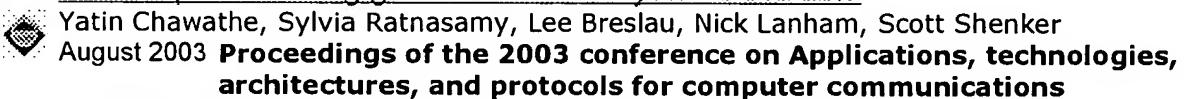

Publisher: ACM Press

Full text available: pdf(93.89 KB) Additional Information: full citation, abstract, references, index terms

P2P systems inherently have high scalability, robustness and fault tolerance because there is no centralized server and the network self-organizes itself. This is achieved at the cost of higher latency for locating the resources of interest in the P2P overlay network. Internet telephony can be viewed as an application of P2P architecture where the participants form a self-organizing P2P overlay network to locate and communicate with other participants. We propose a pure P2P architecture for the ...

30 Peer-to-peer: Making gnutella-like P2P systems scalable

Publisher: ACM Press

Full text available: pdf(181.52 KB)

Additional Information: full citation, abstract, references, citings, index terms

Napster pioneered the idea of peer-to-peer file sharing, and supported it with a centralized file search facility. Subsequent P2P systems like Gnutella adopted decentralized search algorithms. However, Gnutella's notoriously poor scaling led some to propose distributed hash table solutions to the wide-area file search problem. Contrary to that trend, we advocate retaining Gnutella's simplicity while proposing new mechanisms that greatly improve its scalability. Building upon prior research [1, 1 ...

Peer-to-Peer (P2P) file sharing software has brought a hot discussion on P2P file sharing among all businesses. Freenet, Gnutella, and Napster are the three most popular P2P file sharing applications. They use three distinct protocols and these protocols come with different characteristics. In this paper, we discuss the protocols of these P2P file sharing applications, in terms of the methodologies used for peer registry, query and content sharing. In order to maximize the benefit of P2P file sh ...

34 Distributed: Improving collection selection with overlap awareness in P2P search

engines

Matthias Bender, Sebastian Michel, Peter Triantafillou, Gerhard Weikum, Christian Zimmer August 2005 Proceedings of the 28th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '05

Publisher: ACM Press

Full text available: pdf(247.19 KB) Additional Information: full citation, abstract, references, index terms

Collection selection has been a research issue for years. Typically, in related work, precomputed statistics are employed in order to estimate the expected result quality of each collection, and subsequently the collections are ranked accordingly. Our thesis is that this simple approach is insufficient for several applications in which the collections typically overlap. This is the case, for example, for the collections built by autonomous peers crawling the web. We argue for the extension of ex ...

35 Networks: Search and replication in unstructured peer-to-peer networks

Qin Lv, Pei Cao, Edith Cohen, Kai Li, Scott Shenker

June 2002 Proceedings of the 16th international conference on Supercomputing

Publisher: ACM Press

Full text available: pdf(510,93 KB)

Additional Information: full citation, abstract, references, citings, index terms

Decentralized and unstructured peer-to-peer networks such as Gnutella are attractive for certain applications because they require no centralized directories and no precise control over network topology or data placement. However, the flooding-based query algorithm used in Gnutella does not scale; each query generates a large amount of traffic and large systems quickly become overwhelmed by the query-induced load. This paper explores, through simulation, various alternatives to Gnutella's query ...

Distribution of content, such as music, remains one of the main drivers of P2P development. Subscription-based services are currently receiving a lot of attention from the content industry as a viable business model for P2P content distribution. One of the main problems that such services face is that users may choose to redistribute content outside the community of subscribers, thereby facilitating large-scale piracy. Digital Rights Management (DRM) systems typically employ tamper resistance te ...

Posters: WAND: a meta-data maintenance system over the internet

Anubhav Bhatia, Saikat Mukherjee, Saugat Mitra, Srinath Srinivasa

window

May 2005 Special interest tracks and posters of the 14th international conference on **World Wide Web**

Publisher: ACM Press

Full text available: pdf(57, 12 KB) Additional Information: full citation, abstract, references, index terms

WAND is a meta-data management system that provides a file-system tree for users of an internet based P2P network. The tree is robust and retains its structure even when nodes (peers) enter and leave the network. The robustness is based on a concept of virtual folders that are automatically created to retain paths to lower level folders whenever a node hosting a higher-level folder moves away. Other contributions of the WAND system include its novel approach towards managing root directory infor ...

Kosha: A Peer-to-Peer Enhancement for the Network File System Ali Raza Butt, Troy A. Johnson, Yili Zheng, Y. Charlie Hu

November 2004 Proceedings of the 2004 ACM/IEEE conference on Supercomputing

Publisher: IEEE Computer Society

Full text available: pdf(311.17 KB) Additional Information: full citation, abstract

This paper presents Kosha, a peer-to-peer (p2p) enhancement for the widely-used Network File System (NFS). Kosha harvests redundant storage space on cluster nodes and user desktops to provide a reliable, shared file system that acts as a large storage with normal NFS semantics. P2p storage systems provide location transparency, mobility transparency, load balancing, and file replication - features that are not available in NFS. On the other hand, NFS provides hierarchical file organization, dire ...

Overlay networks, scalability and internet economics: Monetary incentive with reputation for virtual market-place based P2P

Krit Wongrujira, Aruna Seneviratne

October 2005 Proceedings of the 2005 ACM conference on Emerging network experiment and technology CoNEXT'05

Publisher: ACM Press

Full text available: pdf(437.74 KB) Additional Information: full citation, abstract, references, index terms

One of the underlying assumptions on the design of peer-to-peer (P2P) network is that each peer trusts each other for forwarding transit messages. However, with the growth of P2P application, especially in business model, some peers may behave as selfish, irrational nodes due to conflict of interest or for conservation bandwidth. In our model, the P2P network is considered as a virtual market-place where peers can find, provide, and use services. Since peers are owned and operated by different e ...

Peer-to-peer systems appear promising in terms of their ability to support ad hoc, spontaneous collaboration. However, current peer-to-peer systems suffer from several deficiencies that diminish their ability to support this domain, such as inflexibility in terms of discovery protocols, network usage, and data transports. We have developed the Speakeasy framework, which addresses these issues, and supports these types of applications. We show how Speakeasy addresses the shortcomings of current p ...

Location tracking: A secure P2P architecture for location management

Kaouthar Sethom, Khaled Masmoudi, Hossam Afifi

May 2005 Proceedings of the 6th international conference on Mobile data management MEM '05

Publisher: ACM Press

Full text available: pdf(141.71 KB) Additional Information: full citation, abstract, references, index terms

Networking and computing have become so tied and have naturally integrated our daily life and are evolving to a ubiquitous and transparent interaction between users and information. Distributed and collaborative architectures particularly P2P solutions, proved to be the most efficient way to meet the requirements of pervasive computing. However, many security and mobility issues have to be considered. In this paper, we propose a secure architecture for location management in mobile environments. ...
